**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

***Claim Objections***

1. Claim 1 objected to because of the following informalities: The term "the said workpiece" recited throughout the claim should be changed to either one such as "the workpiece" or "said workpiece" for a clear antecedent basis. Further, the step of "not constantly rotating said workpiece.... a predetermined period of time" recited in claim 1, lines 13-15 has been duplicated (lines 16-19). Correction is required.

***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 1-5 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. In this case, the step "constantly rotating said workpiece when said workpiece is moving linearly or at the said predetermined location" recited in claim 1, lines 10-11 and the step "not constantly rotating said workpiece when said workpiece is moving linearly or at the said predetermined location..." recited in claim 1, lines 13-14, are made claim 1 failing to comply with the enablement requirement. How can the method provide two opposite steps such as "constantly rotating said workpiece..." and "not constantly rotating said workpiece" at the same time? Correction is needed.

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

Art Unit: 3742

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 1-5 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, lines 10-15, the step "constantly rotating said workpiece when said workpiece is moving linearly or at the said predetermined location" recited in claim 1, lines 10-11 and the step "not constantly rotating said workpiece when said workpiece is moving linearly or at the said predetermined location..." recited in claim 1, lines 13-14, are indefinite because it is unclear. How can the workpiece can constantly rotate and not constantly rotate at the same time. Clarification or correction is required.

6. Claims 6-9 are allowed.

7. The following is a statement of reasons for the indication of allowable subject matter: the prior art of record does not show or suggest an actuator consisting of a ball screw/ball spline assembly with servo motors and a lift shaft for providing the linear and rotational movement of the workpiece; a means for moving the lift shaft without undue bending or flexing, and a means for holding the workpiece in position on the lift shaft as recited in claims 6-9.

NOTE: Since claim 6 uses means plus function format, it gives rise to the interpretation under 35 USC 112, par. 6 in light of and consistent with the written description of the invention in the application.
